BEIS funding new programme to be run by the Carbon Trust

Seen as a new Industrial Energy Efficiency Accelerator for UK Industry, the Department for Business, Energy and Industrial Strategy (BEIS) is funding a new £9.2 million Industrial Energy Efficiency Accelerator (IEEA), which is being run by The Carbon Trust to strengthen the global competitiveness of British industry.

The IEEA aims to lower costs and increase numbers of available energy efficient technologies across all UK industry sectors.

The IEEA programme seeks innovations that will have the largest cross-sectoral impact on industrial energy efficiency and reducing carbon emissions.

Up to 20 projects will be co-funded with grants from £150k - £750k per project.

Applications should come from a combination of an industrial company and a technology supplier, but in rare cases we will consider innovations driven by industrial companies.

Upcoming workshops:

Sign-up for workshops here:

16 August 2017 – Manchester

24 August 2017 – London

7 September 2017– Glasgow

13 September 2017 – Birmingham

For further information on either the IEEA programme, competition or workshops, please visit the IEEA website, call the Carbon Trust helpdesk on 02071 707001.
